Color Key for Charts

Type of Chart	Scale	Purpose
HARBOR CHARTS (outlined in red)	1:50,000 and larger	For navigation and anchorage in harbors and small waterways.
COAST CHARTS (outlined in purple)	1:50,001 to 1:150,000	For coastwise navigation inside the offshore reefs and shoals, entering bays and harbors of considerable size, and navigating certain inland waterways.
GENERAL CHARTS (outlined in purple)	1:150,001 to 1:600,000	For use when a vessel's course is offshore but when it's position can be fixed by landmarks, lights, buoys, and characteristic soundings.
SAILING CHARTS (outlined in purple)	1:600,001 and smaller	Plotting charts used for offshore sailing between distant coastal ports and for approaching the coast from the open ocean.
SMALL-CRAFT CHARTS (outlined in green)	1:80,000 and larger	Specially designed charts with small craft information.

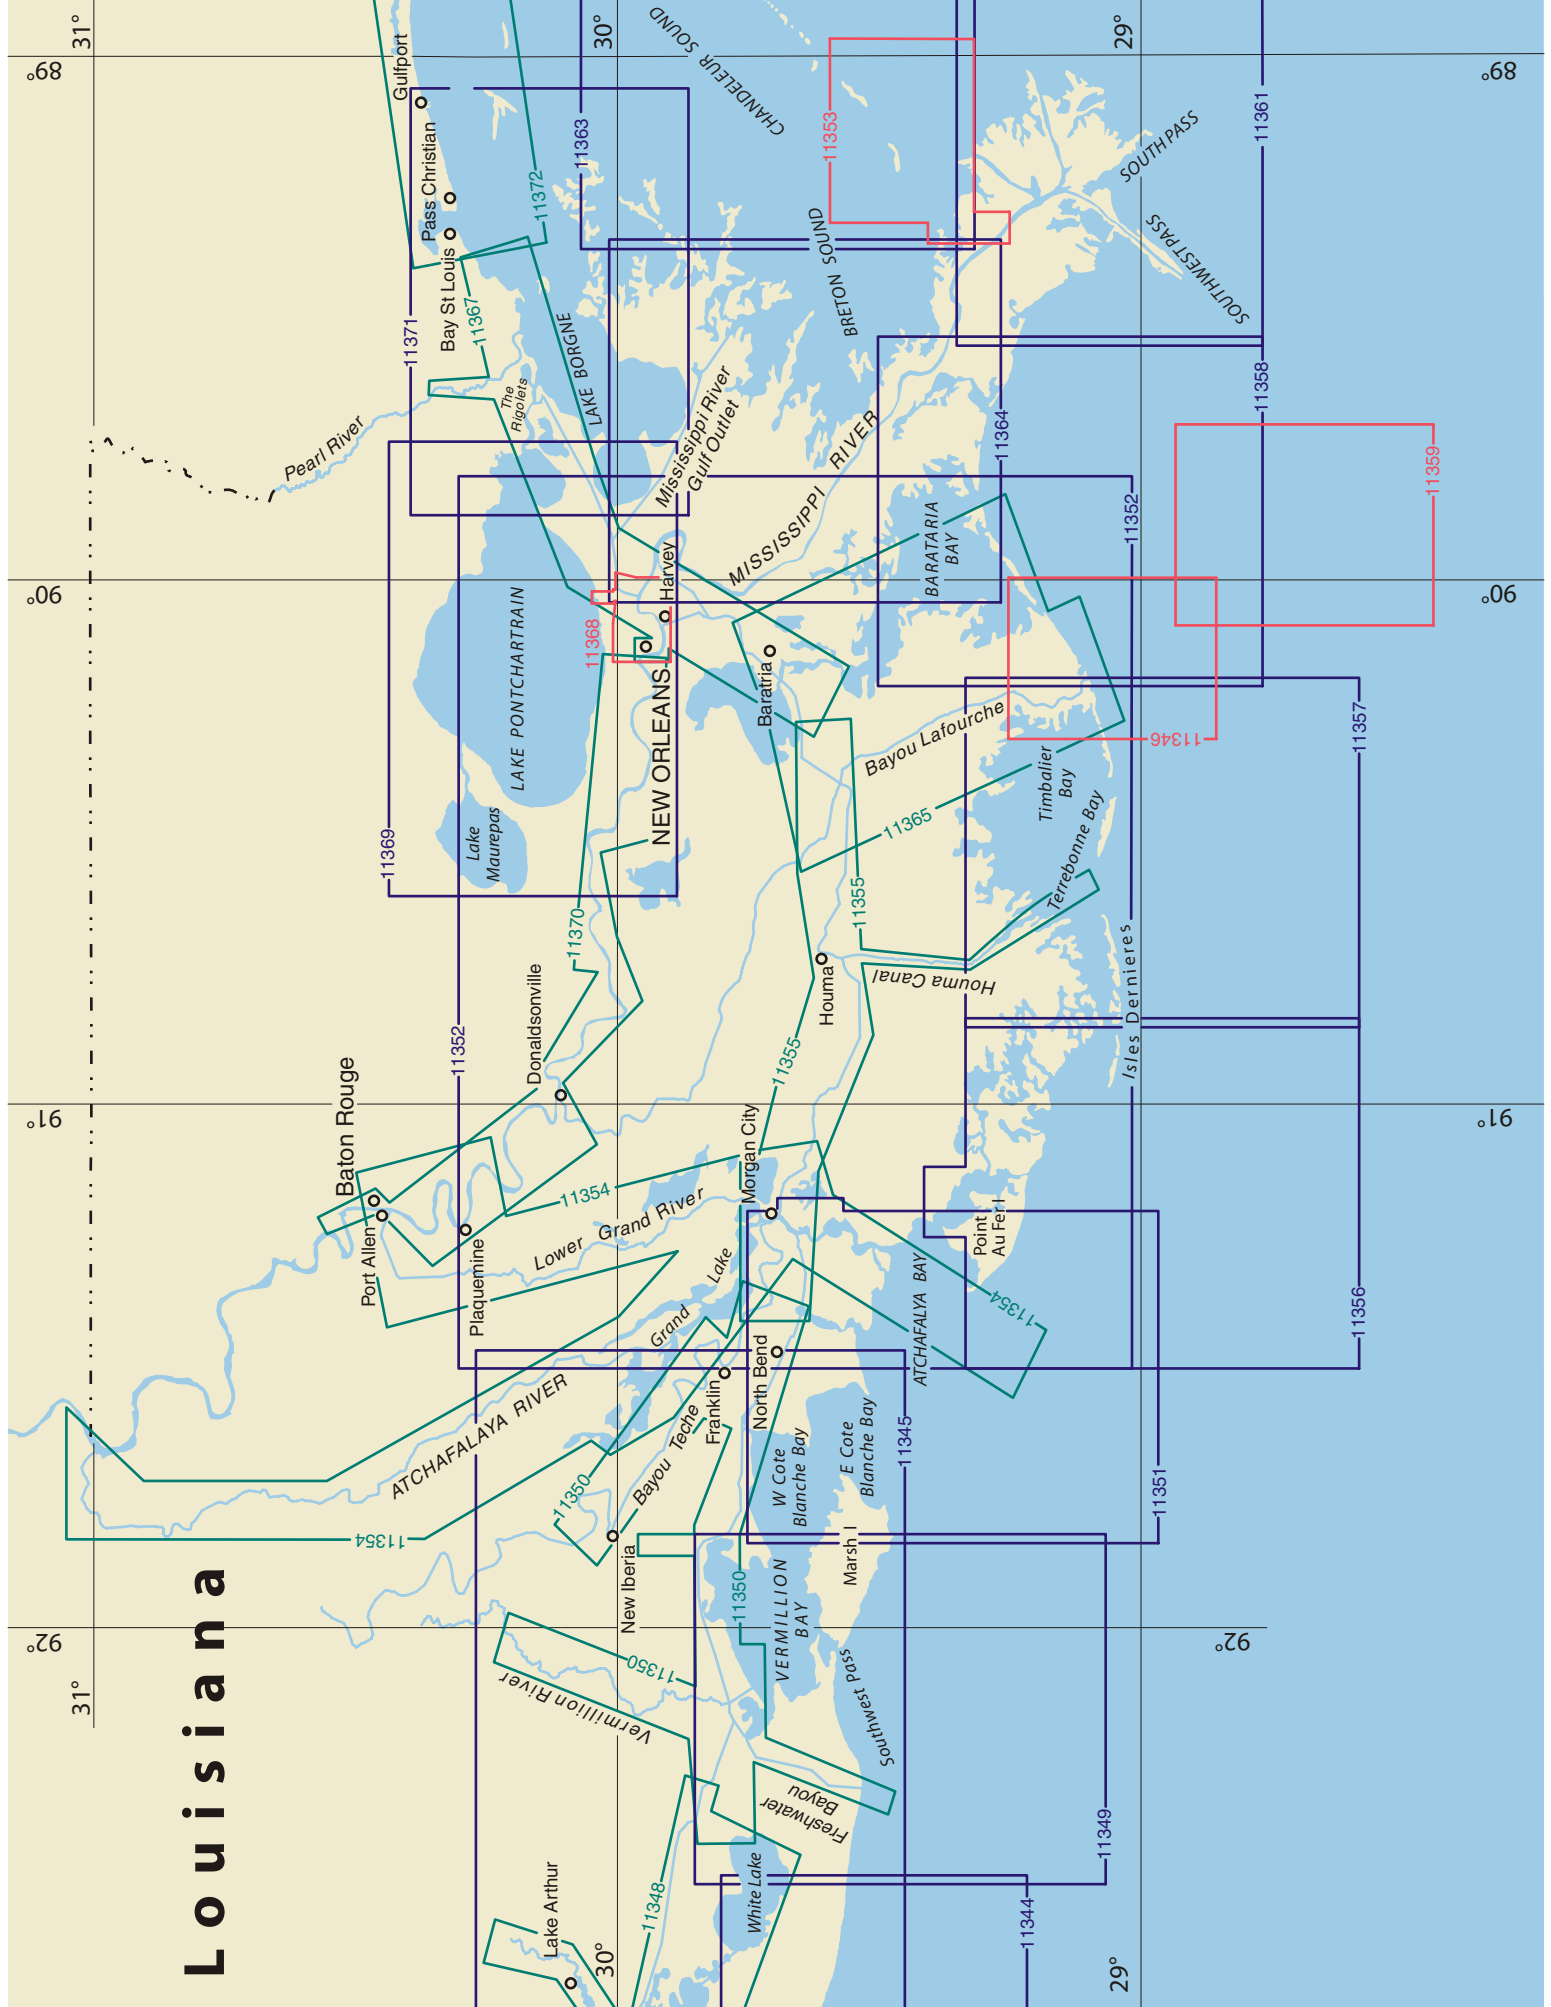

The scale of a chart is the ratio of a given distance on the chart to the actual distance that it represents on the earth. (Example: One unit of measurement on a 1:10,000 scale chart is equal to 10,000 of the same unit on the earth's surface.) **Large-scale charts** show greater detail of a relatively small area. **Small-scale charts** show less detail, but cover a larger area. Certain hydrographic information may be omitted on smaller-scale charts. Mariners should always obtain the largest-scale coverage for near shore navigation.

IMPORTANCE OF UP-TO-DATE NAUTICAL CHARTS

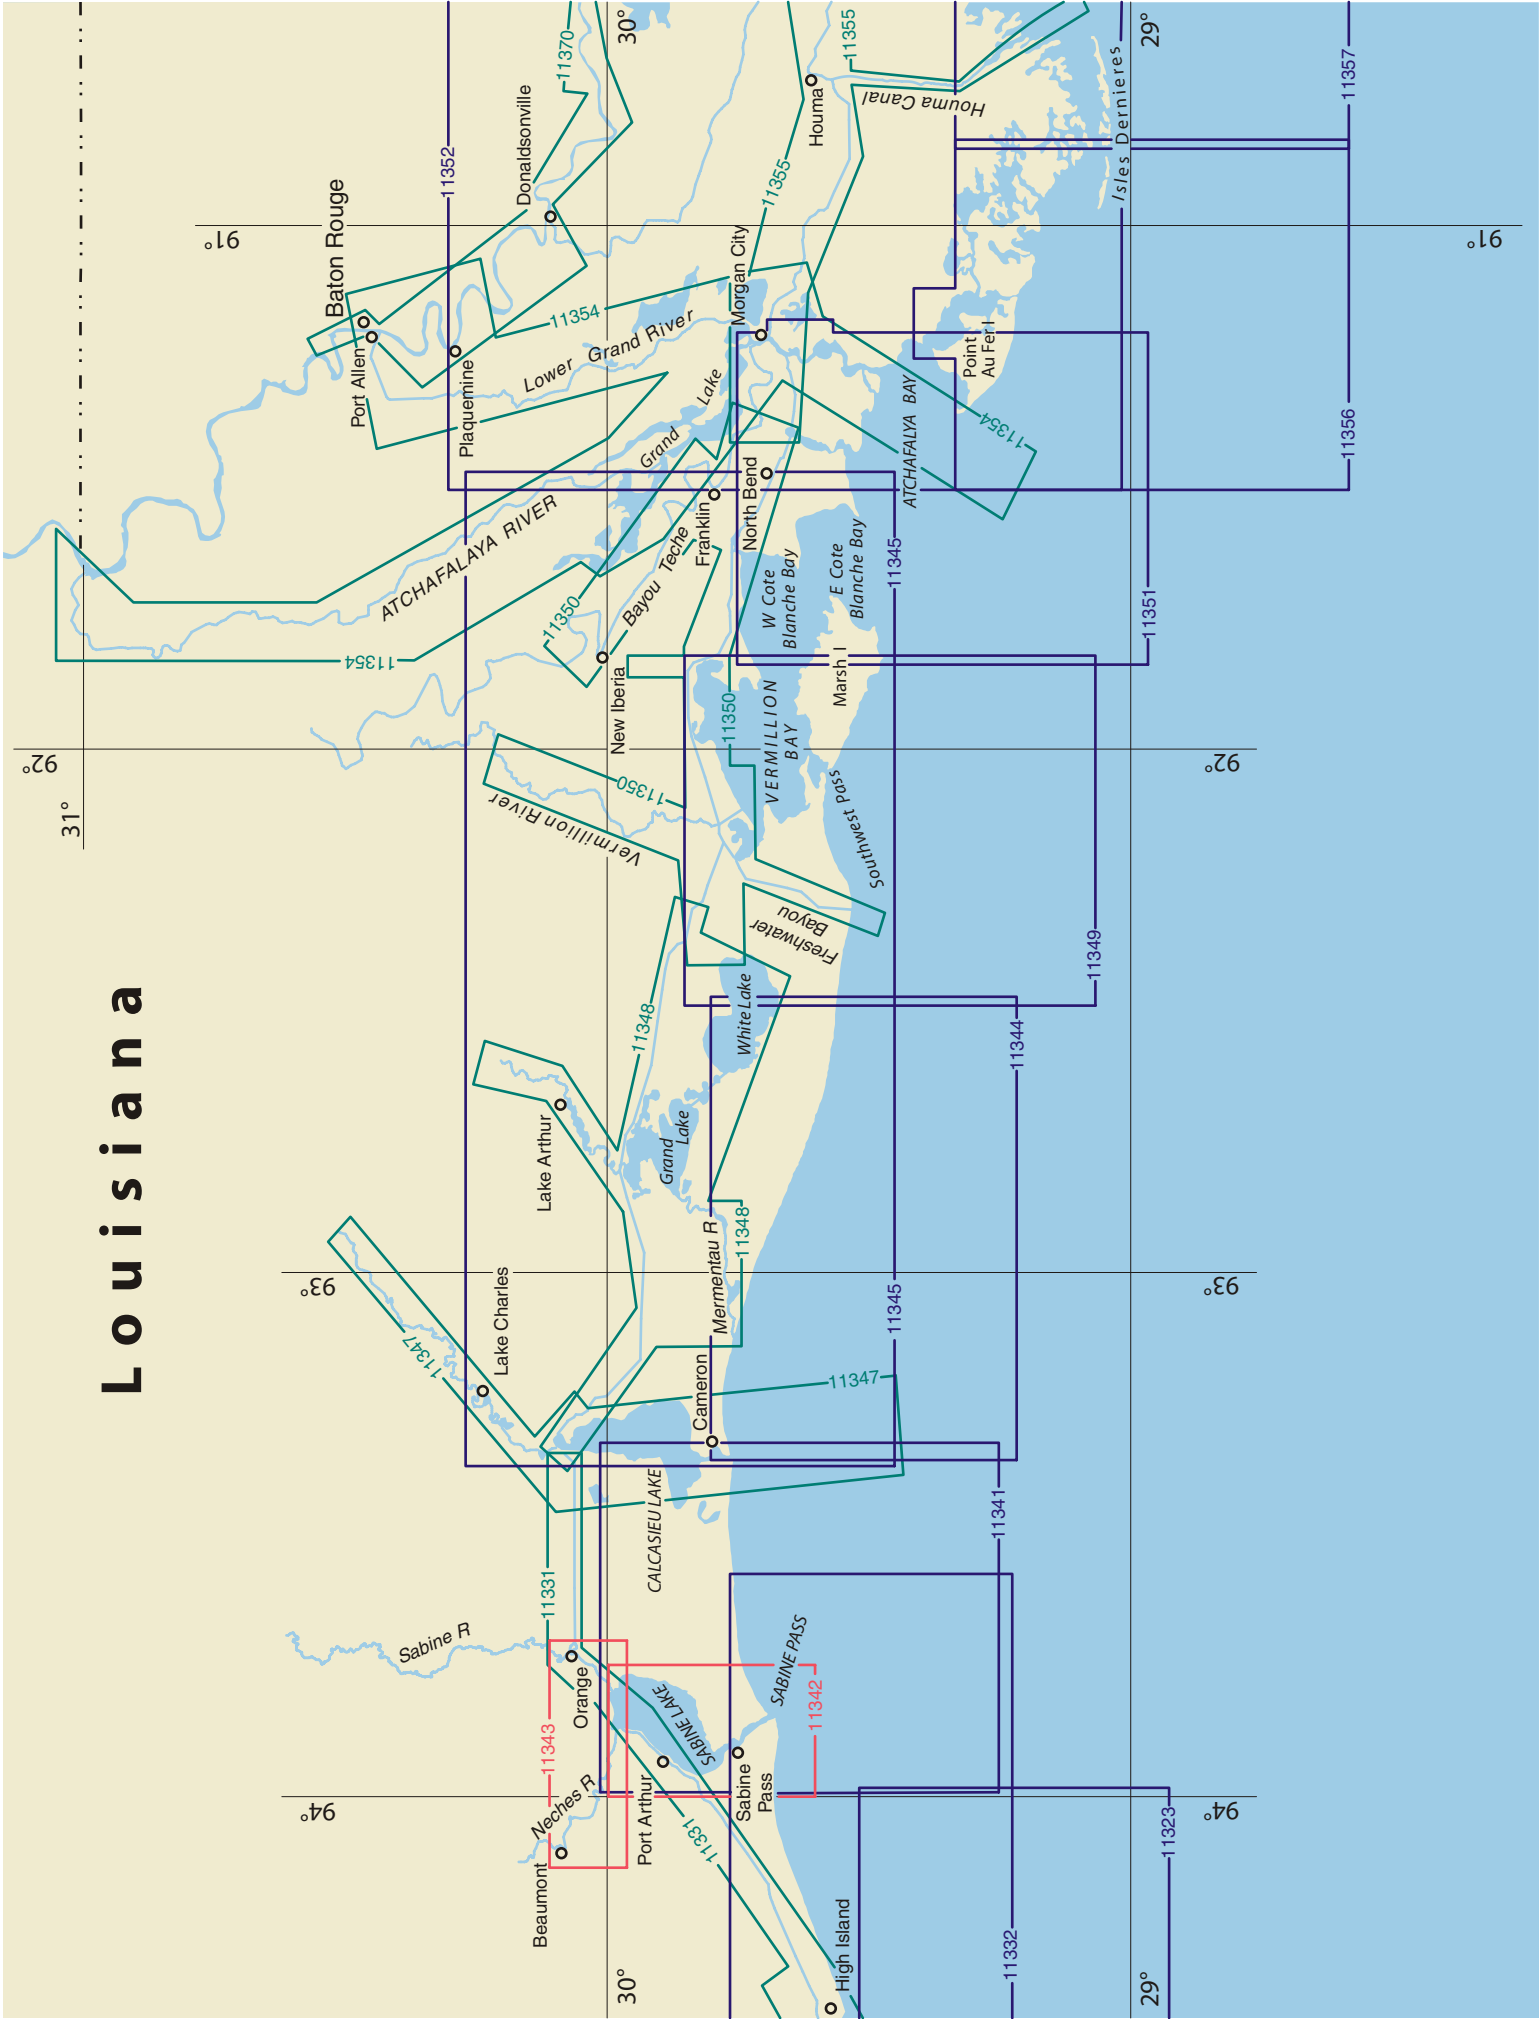

The date of a chart is of vital importance to the navigator. When charted information becomes obsolete, further use of the chart for navigation is dangerous. Natural and artificial changes, many of them critical, are occurring constantly; therefore it is important that navigators use up-to-date charts. Corrections to NOAA Nautical Charts are published weekly in the U.S. Coast Guard's Local Notice to Mariners. (www.navcen.uscg.gov/lnm/default.htm)

New NOS products are not to be used until their availability is announced in the Notice to Mariners. All products should be promptly annotated with the Notice to Mariners number that authorizes their use. This will ensure that only valid products are used.

This map of Louisiana displays its geographical features, major cities, and political boundaries. The state is bordered by Texas to the west, Arkansas to the north, and the Gulf of Mexico to the south. Key waterways include the Mississippi River, Lake Pontchartrain, Lake Maurepas, and the Atchafalaya River. Major cities such as New Orleans, Baton Rouge, and Shreveport are indicated. The map also shows the state's coastline and major highways.

This map of Louisiana displays a complex network of water bodies and land parcels. Major water bodies include the Atchafalaya River, Vermilion River, Grand Lake, Lake Arthur, Lake Charles, Lake Calcasieu, and Lake Sabine. Land parcels are outlined in green and labeled with numbers such as 11354, 11350, 11348, 11347, 11341, 11332, 11331, 11343, and 11342. Infrastructure elements like the Houma Canal, Atchafalaya Bay, Vermillion Bay, Freshwater Bayou, and various passes (Sabine Pass, Southwest Pass) are also shown. The map includes a coordinate grid with latitude and longitude markers (e.g., 29°, 30°, 31° N; 91°, 92°, 93°, 94° W) and a scale bar at the bottom.
